

HPFS on Windows NT 4.0

This method will work on both NT Server and NT Workstation.

To Add HPFS Support in NT 4.0

1. Copy PINBALL.SYS from NT 3.51 distribution to NT 4.0's SYSTEM32\DRIVERS\ directory.
2. Add the following Registry Key:

HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services\Pinball

3. In the above key, add the following values:

ErrorControl: REG_DWORD: 0x1
Group: REG_SZ: Boot file system
Start: REG_DWORD: 0x1
Type: REG_DWORD: 0x2

4. Reboot your system.

Once your system has finished rebooting, your NT machine should now be able to read/write to existing HPFS partitions. Unfortunately, there doesn't seem to be any way to create an HPFS partition from within NT 4.0
